DeepMind
London, UK

August 23, 2019

Dear Internship Coordinator,

I am writing to express my interest in the Robotics Internship program that opened on August 21, 2019.

DeepMind was the team that brought me into the field of AI with AlphaGo and its historic win. I am extremely interested in computer vision and reinforcement learning and their applications in healthcare and swarm robotics.

I am an undergraduate at the National Institute of Technology, Karnataka, India pursuing a bachelor's degree in Electronics & Communication engineering, and will receive my degree in 3 semesters. In my 2 years at my college, I've completed coursework on signal processing, digital system design and embedded system design. The courses I have taken provide me the fundamentals of microcontrollers, computer architecture, image processing, linear algebra, probability and lot more.

I spent the last summer studying computer vision and deep learning, specifically its applications in biomedical image segmentation for the diagnosis of kidney cancer. I learnt the fundamentals of machine learning, deep learning, and how to build a deep learning solution. I also learnt the value of time management, research and organisation. I used all that I learnt during the summer into personal projects involving Computer Vision, Natural Language Processing and Blockchain. I spent the summer of 2018 working as a Python developer for a local firm which helped me grow my skills in team collaboration and verbal communication.

I believe that my projects, skills, experiences, and interests have prepared me to be a strong intern for your program. Thank you for your time and consideration.

Sincerely,
Russel Shawn Dsouza
